Presenting Data Visions

"...things will only get worse if we don't engage in some serious utopian thinking."

Erik Reece, Author of Utopia Drive

#opendata2020

Vision 1
Quality of Data

Filling Female Data Gaps:
A world where data is available without gender bias and gaps.

Moderation: Nikki Böhler

Vision 2
Use of Data

Research Data Connectome :

To connect and organize (meta)data for research sustainably across disciplines, in order to make it widely accessible, interoperable and valuable.

Moderator: Sebastian Sigloch

Vision 3
Protection of Data

Serving, not Spying :

In ten years from now, I don't feel observed and manipulated through the Data being collected about me but i can rely on being served by data for better services, better policies and a better environment.

Moderation: Maud Châtelet

Vision 4
Opening Data

Large Citizen Generated Open Data Sets:

Research institutes routinely use large open data sets, where individuals have securely donated their anonymous high quality personal data of different kinds (e.g. contact tracing data, spatial data, shopping data, media consumption, etc.)

Moderation: Christian Kunz

Vision 5
Use of Data

Better use of data in Switzerland:

Public and private sector data is open, shared, and used for public and private good within a trustworthy data ecosystem ("Swiss / European DataSpace“).

Moderation: André Golliez

Vision 6
Use of Data

Solid basis for committed debate and innovation:

Data create a critically discussable basis for political analysis and joint shaping of our future just as they enable innovations in everyday life - free access and responsible use are indispensable for an enlightened information society.

Moderation: Andreas Kellerhals

Vision 7
Opening Data

open decentralized data storage

Data is a new form of currency: It is too powerful to be controlled by centralized private entities - let's build a decentralized system to store, share and use data.

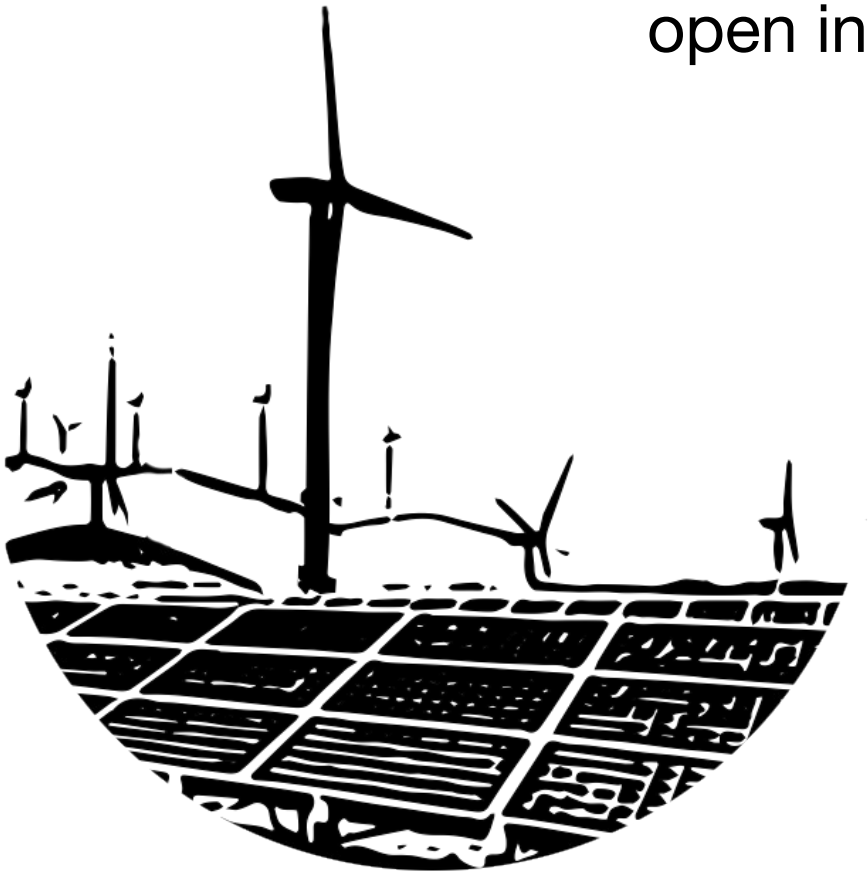

Moderation: Lukas Hess

Vision 8
Opening Data

Shared ecosystem of energy data in Switzerland

Data about energy production and consumption is shared openly by Swiss utility companies, promoting open innovation and helping to reach the "Agenda 2030" climate goals.

Moderation: Emilie Boillat

Owning Data Visions

#opendata2020

Owning Data Visions

1) choose a vision
2) Add your vision number
   to your zoom name
3) open the workshop notes:
   opendata.ch/visions2020
4) trust the moderators

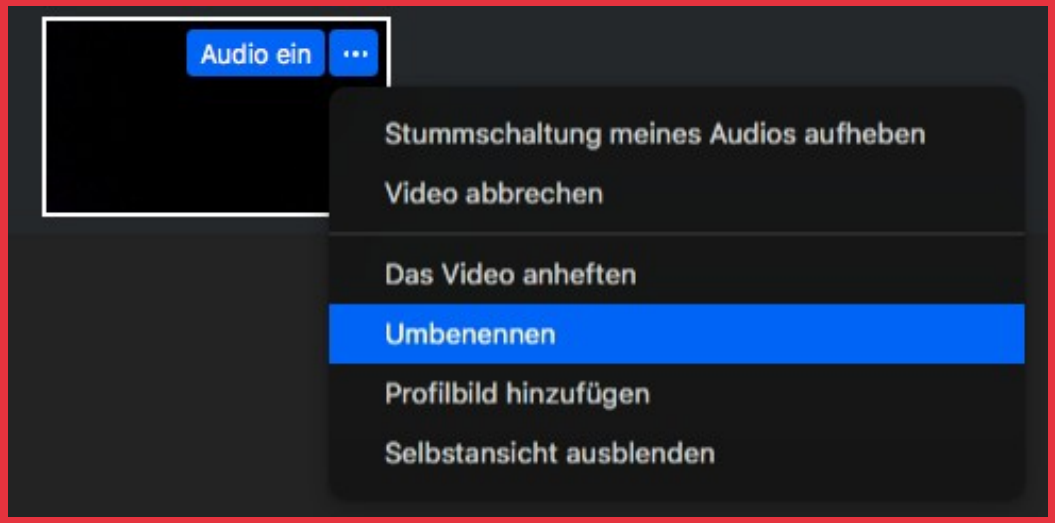

#opendata2020

Owning Data Visions

Change your Zoom name

Number - Name, Organisation

e.g.: 15 - Nikki, Opendata.ch

#opendata2020

Owning Data Visions

1 Filling Female Data Gaps
2 Research Data Connectome
3 Serving, not Spying
4 Large Citizen Generated Open Data Sets
5 Better use of data in Switzerland
6 Solid basis for committed debate and innovation
7 open decentralized data storage
8 Shared ecosystem of energy data in Switzerland

Change your Zoom name:
e.g. “1, Nikki Böhler”

Break until 10:10

Success & Failure in Open Data

opendata.ch/stories2020

#opendata2020

Success/Failure Stories

With the Relaunch of the Website of the Canton of Zurich in the beginning of July 2020 all Open Government Data of Cantonal Organizations will be findable on our Website, too.

#opendata2020

Success/Failure Stories

I learned to work with WikiData in an introduction course by OpenGLAM and added datapoints regarding female directors of museums, which was fun and felt good! :) This is definitely something that I want to do more often in the future and encourage others to do as well.

#opendata2020

Success/Failure Stories

The covid-19 data we gathered on GitHub was a huge success. It really showed the power of open data and a lot of people (including leading news outlets like NZZ and SRF) relied on that data, when the BAG could not deliver.

Success/Failure Stories

Thanks to an excellent collaboration, we were able to open up our COVID19-data as open data much faster than expected. It was a really good example of who working together and examples of best practice helped to foster opening up data!

#opendata2020

Success/Failure Stories

Covid-19 has raised awareness for timely, comprehensive and machine-readable open data, which everyone is allowed to freely re-use.

Success/Failure Stories

Failure: I have invited cultural institutions to open up some datasets, offering council, guidance and practical assistance, but very few responded to my call.
